Allscripts works with a number of software developers and HIT vendors through our Allscripts Developer Program. The applications on this list have either self-reported that their solution is “production ready” for Allscripts clients and patients to use or, if indicated, have been tested through the certification process available to organizations participating in the Allscripts Developer Program

All solutions on this list use FHIR enabled APIs provided by Allscripts and available to Allscripts clients using Sunrise 16.3, TouchWorks 17.1 or Professional 17.1 (minimum versions).

Additional applications will be made available on a regular basis as developers notify Allscripts that they have a production ready solution.

If you are planning to attend an ACE event this year, look for an Allscripts Developer Program presentation on the agenda. We will be providing updates and more information about connecting with FHIR in these sessions.

Please contact developers directly, post a comment here on ClientConnect or send an email to AllscriptsDeveloperProgram@allscripts.com if you have any questions about the applications on this list.
